

Testimonials

For many years, Caraustar has been a leader in manufacturing fiber column forms used to form concrete columns. Our Kolumn Form brand name is known across the country for superior customer service and uncompromising commitment to quality.

Caraustar has now taken a giant step forward in improving the use of Kolumn Forms. A team of dedicated engineers and paper converting specialists worked together to develop the most exciting product that has come to the market—one that is surely to be the first choice among concrete contractors.

KlimatePRO maintains all of the advantages of the traditional Kolumn Form— inexpensive, light weight, easy to set and strip—but has one major advantage-- **Klimate**PRO is rain resistant.

“With Caraustar’s KlimatePRO Kolumn Forms you need not worry about sudden changes in the weather!” says Keith Kandrack, Dealers Supply Company, Callery, PA. “Not long ago we had a flat bed truck break down in the middle of a rain storm. This truck was loaded with Caraustar’s new product, KlimatePRO. Because of the rain, the truck sat on the highway overnight and was towed back to the shop the next morning. Before I had a chance to check on the material, our dock hands had reloaded the forms and shipped them to the customer. I anxiously called the customer to find out how quickly we needed to send replacements. Much to my surprise he was already using the forms!”

Proprietary paper and glue, developed and manufactured by Caraustar’s own paper mills and adhesive facilities, make **Klimate**PRO the superior product to be used in inclement weather.

According to Ray Kelly of National Construction Specialties, Detroit, MI, “Caraustar’s new Kolumn Form, KlimatePRO, is a more effective product for pouring concrete columns in moderate rain. It is the best product for use in real world applications where rain is often a delay. With KlimatePRO you can set it and forget it— KlimatePRO is the “gold standard” of water resistant form tubes.”
